

CNR KOREA

Carbon-Neutral Renewable & Environmental Solutions

Company Overview

CNR Korea is an environmental technology company specializing in integrated solutions for marine ecosystems, water resources, renewable energy, and environmental restoration. By leveraging low-energy, high-efficiency, non-entry, and unmanned technologies, CNR Korea delivers practical and scalable solutions for marine protection, clean water production, sustainable energy generation, and remediation of polluted environments.

Core Technologies

- **Eco-Friendly Marine Intake System for Ecosystem Protection** – Low-velocity, low-impact seawater intake technology designed to minimize harm to marine life.
- **Waste Oil Refining & Industrial Wastewater Treatment System** – Environmentally responsible systems for recycling waste oil into usable resources and treating high-strength wastewater.
- **Marine Pollution Cleanup & Soil Remediation System** – Restoration technologies for contaminated marine environments, coastlines, and polluted soils.
- **Non-Entry Crude Oil Storage Tank Cleaning System** – Unmanned, non-entry tank cleaning technology ensuring maximum operational safety.
- **One-Batch Type Complete-Combustion Incinerator-Based Seawater Desalination** – Integrated waste treatment, thermal energy recovery, and desalination system.
- **Gravity-Driven Multi-Layer Desalination System** – Low-power desalination using gravitational pressure and ion-selective layers.
- **Multi-Stage Compressed Dual-Flow Wind Turbine** – Low-noise, low-vibration next-generation wind power technology.
- **Hydropower & Tidal Power Generation Technology** – Eco-friendly power systems for low-head river and tidal flow environments.
- **Small-Scale Thermal Power Generation (Steam / Waste-to-Energy)** – Compact, high-efficiency thermal and steam turbine systems utilizing waste heat.

Key Strengths

- Low-energy, high-efficiency environmental design
- Non-entry, unmanned, and safety-oriented technologies
- Integrated water, energy, and environmental restoration solutions
- Patent-backed technologies with field validation
- High scalability for global infrastructure and environmental projects
